

Core Lab Interaction

Homework 1

Handwritten HTML

Create one handwritten page of HTML code that is an unordered list of your class schedule this term at university.

Requirements

- Make sure your code also (at least) contains `<html>`, `<head>`, `<title>`.
- Wrap a hyperlink inside each ``, this hyperlink will have `href="_____"` and inside the quotes will be the location (space and/or time) of your class in English. The information in the quotes can be however detailed and in whatever format you like.
- Use at least 3 colors and make a conscious decision about representing different parts of the code.

I find it helpful to first write in pencil, then in pen, then erase the pencil

Discussion

Come to class with an internal vocabulary about the parts of the code that you styled with different colors. How do you think of them and describe them to yourself? What function does each serve to you? to the computer?

At a quick glance of your finished product, what information stands out most? Are there any benefits or downsides to this?

```
<li><a href="_____">_____</a></li>
```
